Our Goal:

To ensure that your IT infrastructure & systems are protected from cybercriminals & internal accidents by minimizing your cybersecurity risk & threat landscape.

1. Cybersecurity Risk Assessment Services

Services	Details
Cybersecurity Risk Posture	<i>We asses the organization/business unit's readiness to cyber risks using the NIST CSF and CIS controls.</i> <i>This enable us to determine the organization's maturity level and offer a clear gap analysis and ability to put a practical cybersecurity plan and roadmap for implementing a well governed & controlled cybersecurity technology architecture.</i>
Cybersecurity Controls Posture	
Cybersecurity Technology Architecture Posture	

“Cybersecurity is everybody’s business”

2. Cybersecurity Remediation Services

Services	Details
Remediation plan implementation	<i>These services allow the organization to map its cyber risk appetite and adopt appropriate cybersecurity strategy, cybersecurity plan, policies, processes and procedures that applies to their industry and implement required cybersecurity tools.</i> <i>QuiverSoftech is experienced in prioritizing cybersecurity remediation projects to address the cybersecurity gaps and assist in implementing the remediation or treatment tasks using either commercial, open source tools or a hybrid of these tools.</i>
Cybersecurity risk treatment plan	
Cybersecurity control remediation plan	
Cybersecurity technology architecture remediation plan	
Cybersecurity policies and procedures	
Cybersecurity strategy	
Cybersecurity governance framework	

“Cybersecurity is everybody’s business”

3. Threat & Vulnerability Management Services

Services	Details
Security Audit (Infrastructure and Software applications)	These services uncovers vulnerabilities in network & Servers infrastructure (including routers, switches, mail servers, web servers, proxy servers, application servers, firewalls, IAM etc), commercial & custom application software, code, configuration files, connected devices, web applications, mobile devices etc. and produce a robust and well detailed report with step-by-step remediation instructions. These services are performed by our Red Team to simulate an attacker hunting for vulnerabilities and trying to exploit them using NVT and CVE listed vulnerabilities and practical ethical hacking experience. The outcome of these delivers a comprehensive remedial report and tools recommendations with relevant NIST and CIS controls required to sustain the organization protection against cyber threats. The remediation will align with any regulatory framework and applicable standards that are applicable to your industry. [Scanning, Testing Exploitability, Triage, Recommendations]
Security Architecture Review, Code Security Analysis and Code Security Technical Debt	
Vulnerability Assessment and Penetration Testing (Software Applications & Infrastructure)	
Application security (SAST, DAST, IAST, OWASP Top 10, SANS Top 25, PCI DSS)	
Vulnerabilities treatment planning	

“Cybersecurity is everybody’s business”

4. Cybersecurity consulting

Services	Details
Strategic consulting	<i>We gather custom requirements and provide advisory and a complete set of practical solutions for the specific areas that the organization is concerned in.</i>
IT & Network Security consulting	
Incident Management consulting	<i>The advisory take into consideration the industry that you operate in including your cybersecurity risk appetite, applicable regulatory, standards and frameworks that you require to comply with to succeed.</i>
Cyber risk and enterprise risk consulting	
Cybersecurity and data governance consulting	<i>We consider various standards and frameworks including ISO27001, NIST CSF, CIS, PCI DSS, POPIA, GDPR, OWASP and others.</i>
Business continuity & crisis management	
Security Architecture and design	

“Cybersecurity is everybody’s business”

5. Cybersecurity awareness and training

Services	Details
Cybersecurity end-user training	<i>These services cater for the human vulnerabilities and bolster your workforce in understanding the threats that can be introduced by a single individual within the organization.</i> <i>The weakest link in cybersecurity is the human factor and without properly empowering staff with knowledge, training and awareness on the threats lurking around, security technology architecture is rendered ineffective.</i>
Social engineering awareness	
Automated Phishing assessment	
End-user vulnerability assessment
